convert_sentence_problem

Problem Statement You are given a sentence in the form of a string 'S'. You have to convert 'S' into its equivalent mobile numeric keypad sequence, i.e. print the sequence in such a way that if it is typed on the given keypad, the output should be the string 'S'. A keypad for the reference is shown below.

Note:

1. There will be only lower case letters.

2. There will not be any special characters or capital letters in the input string.

3. There will be no spaces in the string.
